

Gherkin Functional Specifications

Project: World Clock - UI/Layout Enhancements v2

Feature 1: Main Clock and Global Header

Feature: Display a high-level global time summary

Scenario: Verify header and primary digital clock

Given the application is launched

Then I should see a central digital clock displaying time in "HH:mm:ss"

And the clock should have a cyan glow effect

And below the main clock, the date should be displayed

Feature 2: Search Location Relocation

Feature: Relocate City Search Bar

Scenario: Search bar placement

Given the Time Visualizer is active

Then the "Add a city to the timeline..." search bar should be positioned directly above the timeline control bar

And it should be removed from any top-right or sidebar-only positions

Feature 3: Timeline Control Consolidation

Feature: Consolidate Timeline Controls

Scenario: Verify date picker and teams button relocation

Given the timeline is visible

Then I should see a control bar containing the Date Navigator

And the "Teams" button should be placed immediately to the right of the date navigator

And this entire control row should be positioned below the search bar

Feature 4: Layout Alignment (Parallel Selection)

Feature: Align Selection Controls with Text

Scenario: Fix horizontal alignment of timeline labels

Given the timeline controls are displayed

Then the "New York" location text should be on the exact same horizontal baseline as the Date Navigator

And there should be no vertical offset between the search bar and the selection controls

Feature 5: Time Visualizer General Behavior

Feature: Synchronized Time Visualization Grid

Scenario: Display time bars and vertical synchronization

Given multiple cities are added to the list

Then each city should show a horizontal 24-hour bar

And a vertical cyan line should indicate the "Current Time" across all city bars simultaneously

And the vertical line must span the entire height of the timeline grid
